SKILLS

- ❖ **Programming:** Python, JavaScript (ES6 fundamentals)
- ❖ **Data Structures & Algorithms:** Arrays, Strings, Hashing, Two Pointers, Stack, Linked List, Sorting, Binary Search, Trees, Backtracking, Heap/Priority Queues
- ❖ **Backend Development:** Python FastAPI, REST APIs, Node.js, Express.js
- ❖ **Databases:** PostgreSQL (CRUD operations, Joins, Advanced Clauses etc)
- ❖ **Web Development:** HTML, CSS, JavaScript
- ❖ **Tools & Workflows:** Git and GitHub, VS Code, Deployment basics
- ❖ **Competitive Programming:** Active on Leetcode - 150+ Problems Solved

EXPERIENCE

- ❖ **MIS Executive - Automation Scripts | Goyal Textiles Pvt. Ltd., Delhi** Aug 2025 – Jan 2026
 - Built and maintained automation scripts using JavaScript (Google Apps Script) to process, validate, and transform operational data across multiple sheets.
 - Designed workflows to automate recurring reports, reducing manual execution and human errors.
 - Collaborated with business users to translate manual processes into reusable, code-based solutions.**Tech Stack:** JavaScript, Google Apps Script

EDUCATION

- ❖ Bachelor of Computer Applications (BCA) | IGNOU ODL 2026
- ❖ XII (CBSE) | Govt. Sarvodaya Vidyalaya, Burari, Delhi 2023

PROJECTS

- ❖ **Smart Sales Data Analysis System (SSDAS) | Full-Stack Web Application**
 - Built a Flask-based backend application for uploading and processing CSV/Excel files, with validation and error handling for inconsistent user inputs.
 - Implemented data parsing, validation, and preprocessing logic using Pandas to handle inconsistent formats and missing values.
 - Designed backend logic to compute insights such as rolling sales metrics (7-day, 30-day), category-wise aggregation, and average sales etc.
 - Integrated PostgreSQL for structured storage and querying of processed data.**Tech Stack:** Python, Flask, Pandas, PostgreSQL, HTML, CSS, Git, Github
- ❖ **YouTube Clone | Full-Stack Video Streaming Application**
 - Built a full-stack video-sharing platform supporting video uploads and streaming.
 - Implemented **Firebase Authentication** with protected routes, allowing authenticated users to upload videos while enabling public users to watch videos without signing in.
 - Developed a video upload and processing pipeline using **Cloud Storage, Pub/Sub, Cloud Run, and FFmpeg**, converting uploaded videos to **360p** for web playback.
 - Designed Firebase data models for storing **users, video metadata, and processed video information**, with APIs for retrieving and serving videos.
 - Integrated PostgreSQL for structured storage and querying of processed data.**Tech Stack:** Typescript, Node.js, Express.js, Firebase, Pub/Sub, Cloud Run, FFmpeg, REST APIs, Git, Github
